I have a notable ability for rapid learning and solid experience in multicultural teams. My work ethic and collaboration skills have made me a key member of these teams, contributing to the development of successful projects that have significantly boosted the performance of the companies I have worked for.

Experience

● Python Developer @ Chile Registros 2023 - 2024

I automated data collection through RPA, scraping multiple sources to store data efficiently. I implemented an advanced search system that allowed the production team quick access to this data, significantly reducing product generation time. Additionally, I containerized existing applications and implemented containers in AWS, streamlining deployment processes and improving the overall operational efficiency of the IT area.

● Python Developer @ Cumplimiento Lean 2023 - 2023

I developed an innovative platform that stood out for incorporating an artificial intelligence service, implemented and deployed in Docker, specializing in the transcription of multimedia files. This functionality allowed users to transcribe recorded files, drastically reducing transcription time from hours to minutes. As a result, user efficiency increased significantly, going from one transcription per day to more than ten, significantly improving productivity.

● Python Developer @ Grupo Cubo Ltda 2021 - 2023

I led the development of custom APIs and backend for an advanced process management platform. Successfully implemented CI/CD methodologies, optimizing software delivery and efficiency. Focused on improving query performance and report generation, providing crucial strategic insights. Additionally, I offered expert support in SQL databases, significantly contributing to the success of the projects.

Education

● Platzi 2023-2023

Backend Python

● Universidad del magdalena 2017-2022

Electronic Engineer

● Universidad del norte 2021-2021

Software Development

Skills

Technologies

Python, JavaScript, C, CSS, HTML, Bash

Libraries & Frameworks

Django, Flask, FastAPI, Node JS, Angular, React, Selenium

Tools

Git, Github, Docker, Kubernetes, AWS EC2, AWS RDS, Nginx

Databases

PostgreSQL, SQL Server, MongoDB, Redis
